                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Direct Submission

Submitted (13-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, 77030, USA

On Nov 13, 2002 this sequence version replaced gi:23832296.

The Sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Bach contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig escafeld'). Within each contig escaffold, individual sequence configs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (29-UIN-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 348283)

                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bom.tmc.edu/docs/Genbank_draft_data.html)
NOTE: This sequence may represent more than one clone.
NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                     11765: contig of 11765 bp in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           * NOTE: This is a 'working draft' sequence. It currently consists of 14 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently a consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 8 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

1 10790: contig of 10790 bp in length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Insert size: 186000; agarose-fp

On Jul 24, 2002 this sequence version replaced gi:9972313.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such one plasmid subclone or more than one M13 subclone; and the least one plasmid subclone or more than one M13 subclone; and the Location/Qualifiers

On Feb 21, 2002 this sequence version replaced gi:17426517.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was contirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; Sw; SwiSSROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP.

humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Feb 7, 2000 this sequence version replaced gi:6782223.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORNPEP; Information on the WORNPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGPYChr6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ALLISDISO 69674 bp DNA linear PRI 04-MAR-2003 Human DNA sequence from clone RPI-39M18 on chromosome 6q26-27,

* NOTE: This record contains 84 individual
sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 27 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

AC073081/c

```
Data from AC092430 was used to finish this clone, AC073081. Polymorphisms have been identified between AC073081 and AC092430. A PCR only region exists between bases 98579 to 98669.
                                                                                                      The clone sequenced to the left is RP11-406M18, 2000 bp overlap. Actual end of this clone is at base position 118001 of RP11-310H21.

It currently consists of 28 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Quality coverage: 4.4 in Q20 bases; agarose-fp Quality coverage: 4.4 in Q20 bases; sum-of-contigs

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30; an attempt was made to resolve all sequencing problems, such as Compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest. This sequence was finished as follows unless otherwise noted:

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

## SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male defonor, as described by Oseegawa, K., Woon, P. Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and Coworkers at http://www.chori.org VECTOR: pBACe3.6

## NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the right is RP11-742M10, 2000 bp overlap. Actual end is at base position 32235 of RP11-742M10.

Polymorphisms have been identified between AC092430 and AC109822.
Data from AC073081 was used to finish this clone, AC109822.

* NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                   2137: contig of 2137 bp in length

NOTE: This is a "working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2831: contig of 2831 bp in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 28 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequencing vector: pUC18; 100% of reads

It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ; sum-of-contigs

consists of 39 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of 6896 bp in length

NOTE: Betimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.h NOTE: This is a "working draft's sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gapa

Chromosome 3p genomic sequence
                                                                                                                                                                                                                                                                                                        100101, P.R.China
On Feb 3, 2000 this sequence version replaced gi:6684183.
*NOTE: This is a 'working draft' sequence. It currently
consists of 33 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will

be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 67.3%; Score 20.2; DB 2; Length 216530;

This sequence represents a PCR primer used to amplify a carrot promoter sequence. The invention relates to plant promoters and terminators from baucus carota L. which are capable of expressing a gene of interest in plants. The invention also includes a chimeric gene characterized in that it comprises the promoter and a desired gene linked to each other in the form capable of functioning. A method of producing a transformant comprises introducing the promoter, the chimeric gene or a vector comprising the promoter and a desired gene or terminator sequence into a host cell. The plant promoters and terminators are useful in plant breeding, for e.g. fertilities of plants may be controlled by expressing, in the host cells, a sense or antisense gene of a male sterility related gene such as S-locus-specific RNase gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Carrot; promoter; terminator; transgenic plant; breeding; fertility; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠે
                                                                                                                                                                                                                                                                                                                                     ö
                                                                                           This sequence represents a plasmid sequence used in a method for introducing a mutation into a carrot promoter. The invention relates to plant promoters and terminators from Daucus carota L. which are capable of expressing a gene of interest in plants. The invention also includes a chimeric gene characterized in that it comprises the promoter and a desired gene linked to each other in the form capable of functioning. A method of producing a transformant comprises introducing the promoter, the chimeric gene or a vector comprising the promoter and a desired gene or terminator sequence into a host cell. The plant promoters and terminators are useful in plant breeding, for e.g. fertilities of plants may be controlled by expressing, in the host cells, a sense or antisense gene of a male sterility related gene such as S-locus-specific RNase gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a plasmid sequence used in a method for introducing a mutation into a carrot promoter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a carrot promoter. The invention relates to plant promoters and terminators from Daucus carota L. which are capable of expressing a gene of interest in plants. The invention also includes a chimeric gene characterized in that it comprises the promoter and a desired gene linked to each other in the form capable of functioning. A method of producing a transformant comprises introducing the promoter, the chimeric gene or a vector comprising the promoter and a desired gene or terminator sequence into a host cell. The plant promoters and preminators are useful in plant breeding, for e.g. fertilities of plants may be controlled by expressing, in the host cells, a sense or antisense gene of a male sterility related gene such as S-locus-specific RNase gene
terminators are useful in plant breeding, for e.g. fertilities of plants may be controlled by expressing, in the host cells, a sense or antisense gene of a male sterility related gene such as S-locus-specific RNase gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a carrot promoter. The invention relates to plant promoters and terminators from Daucus carota L. which are capable of expressing a gene of interest in plants. The invention also includes a chimeric gene characterized in that it commisses the promoter and a desired gene linked to each other in the form capable of functioning. A method of producing a transformant comprises introducing the promoter, the chimeric gene or a vector comprising the promoter and a desired gene or terminator sequence into a host cell. The plant promoters and terminators are useful in plant breeding, for e.g. fertilities of plants may be controlled by expressing, in the host cells, a sense or antisense gene of a male sterility related gene such as S-locus-specific RNase gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

This sequence represents a plasmid sequence used in a method for introducing a mutation into a carrot promoter. The invention relates to plant promoters and terminators from Daucus carcta L. which are capable of expressing a gene of interest in plants. The invention also includes a chimeric gene characterized in that it comprises the promoter and a method of gene linked to each other in the form capable of functioning. A method of producing a transformant comprises introducing the promoter, the chimeric gene or a vector comprising the promoter and a desired gene to terminator sequence into a host cell. The plant promoters and terminators are useful in plant breeding, for e.g. fertilities and may be controlled by expressing, in the host cells, a sense or antisense gene of a male sterility related gene such as S-locus-specific RNase gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó

characteristics. Specifically, it refers to identifying one of more plants.

Conform-regulated in transgenic plants overexpressing the heterodimeric E2Fa/DPs transcription factor of Arabidopsis and usang these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, carymass, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal cansiduction, storage lipid mobilisation and/or altered photosynthesis, each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers (auring transformation of cells or tissues. The identified genes play a role in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/or carbon metabolism or they function as
                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Altering plant characteristics, useful for producing plants for enzyme or pharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or
                 the roots of carrots, cultivar Kuroda Gosun. The promoter can be used to direct root-specific expression in plant cells. Since the promoter enables expression of a desired protein in the roots of a plant, it is useful in combat against pathogenic soil fungi and pests which are difficult to kill by chemicals. It can also be used to improve the nutritive value of edible root plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for altering one or more plant

The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (1) for screening drug candidates; (1) for screening of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (11) for screening of bloactive agent capable of modulating the activity of CAP; (1v) for arcinoma; (vi) for inhibiting the activity of CAP; (vi) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (vi) for treating carcinoma; (vii) for neutralizing the effect of CAP; (vi) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for determining Carcinoma as a bropessity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding caucinoma including lymphoma. The present sequence is one such CA coding US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
transcription factors. This polynucleotide sequence is thale cress cDNA upregulated 1.3 fold or more in plants overexpressing the E2Fa/DPa

Cotton androecium tissue EST Clone ID: LIB3828-012-Q1-N6-C3, SEQ:6008.

```
The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of bioactive agent capable of bioactive agent capable of bioactive agent capable of modulating the activity of CAP; (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (vii) for traating carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing acrcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma and (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding captence. Note: This patent is an equivalent to basic patent CA coding USC 002182586A1, for which no sequence data was published

The invention relates to 17880 cotton expressed sequence tags (ESTB;
ACNA5220-ACN63099). The ESTB were isolated from CDNA libraries generated
CC ACNA5220-ACN63099). The ESTB were isolated from CDNA libraries generated
CC from primed seeds from variety DPSOB, mature seeds from
variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
tissue, developing fibres, carpel walls and septa from variety
CC Nucottoni3B. The invention also relates to substantially purified
CC invention, and to transformed plants having a nucleic acid construct
CC comprising a nucleic acid of the invention. The cotton ESTB are useful
CC comprising a nucleic acid of the invention. The cotton ESTB are useful
CC comprising a nucleic acid of the invention. The cotton ESTB are useful
CC comprising a nucleic acid of the invention. The cotton ESTB are useful
CC comprising a nucleic acid of the invention. The cotton and because are
CC comprising a variety of agronomically significant genes
CC used for isolating avariety of agronomically significant genes
CC used for isolating avariety of agronomically significant genes
CC used for isolating avariety of agronomically significant genes
CC used for isolating avariety of agronomically significant genes
CC used for isolating and catabolic pathways. The nucleic acid molecules are
CC also useful for identifying genes important in initiating and maintaining
CC seed germination or that may be used to mitigate stresses encountered
CC during seed germination. The ESTS additionally enable the acquisition of
CC during seed germination or that may be used to mitigate stresses encountered
CC during seed germination of molecular markers useful in breeding
CC schemes, generic and molecular markers useful in breeding
CC schemes, generic and molecular markers useful for
CC detecting the expression level or pattern of a protein or mRNA and for
CC detecting the presence or quantity of a protein by tissue printing. The
CC detecting the patent for this patent did not form part from a cotton variety Nucottoni3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  from the US
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox

The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA81451 to AAA82414 represent specifically claimed Neisseria meningitidis genomic DNA sequences. AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA8120 to AAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                 The invention relates to nucleic acids from human chromosome 2p21-16.3
and the encoded peptide (and mouse and chicken orthologues) that
comprises a PGECEPLP group, an insulin-like growth factor binding protein
(IGPBP)-like domain, cysteine-rich domains, an RGD (undefined) group and
a transmembrane domain. The protein, e.g. CRIMI, interacts with peptides
of the transforming growth factor superfamily. A composition comprising
of the transforming growth factor superfamily. A composition comprising
c m expression construct comprising the nucleic acids of the invention or
a mimetic which antagonises or minics an activity of a CRIMI polypeptide
may be used in a method for modulating the biological activity of a
polypeptide of the bone morphogenic protein (BMP) family. In this way
they may be used to prevent or treat an eye disease, especially cataract
formation. They may also be used to treat neurodegenerative diseases,
renal and kidney disease, bone and tooth abnormalities, wounds and skin
damage, e.g. by use of the nucleic acid in gene therapy by using
antibodies directed against CRIMI polypeptides. The present sequence is a
Human genomic DNA containing exons 2-17 of the CRIMI gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Neisseria meningitidis; Neisseria gonorrheae; immunogenic; vaccine; diagnosis; antigen; detection; infection; gene therapy; antibacterial;
                                                                                                                                                                                                                           Nucleic acids from human chromosome 2p21-16.3 and the encoded peptide, useful for preventing, diagnosing and treating e.g. eye disease, especially cataract formation.

The present invention describes the full length genome of Neisseria

meningitidis B (NWB). The sequences in AAF21544 and AAF21607 to AAF21613

ceppresent fragments of the NWB genomic sequence, as the sequence was too

long to go in a record on its own it was split into 8 sequences which

coverlap each other at the beginning and end of each sequence by 49980 bp

(i.e. the last 49980 bp of AAF21544 is repeated at the beginning of

AAF21607, the last 49980 bp of AAF21589 to AAF21600 be

CAAF21608, and so on). AAF21545 to AAF21589 to AAF21606 represent PCR

This sequence encodes a parathyroid hormone receptor type 3 (PTH3R)
receptor protein of the invention. The invention also relates to a PTH1R
receptor protein. Antagonists of PTH1R or PTH3R can be used for the
cutvity, respectively. The peptides are used for diagnosis or prognosis
of diseases and distorders associated with PTH3R or PTH1R, such as cancer.
CC diseases and distorders associated with PTH3R or PTH1R, such as cancer.
CC diseases and distorders as molecular weight markers on sodium
cc neologyl sulphate polyacrylamide gel electrophoresis (SDS-PAGE) gels, or
peptides and polypeptides are useful to raise antibodies, including
cc peptides are useful during diagnosis of diseases antibodies, including
peptides are useful during diagnosis of diseases and disorders in mammals
cc peptides are useful during diagnosis of diseases and disorders in mammals
cc involving PTH1R or PTH3R sequence and/or expression levals of PTH3R
could be diagnostic for patients with disease or disorders of a
molecules are valuable for chromosome identification. The mapping of DNAs
cc coll desarron and disorders and colling and colling those sequences
cc with genes associated with disease. (Updated on 15-SEP-2003 to
                                                                                                                                                                                                                                                                                                                                                                          Novel zebrafish parathyroid hormone/parathyroid hormone related peptide receptor 3 and isolated nucleic acid encoding zebrafish parathyroid hormone receptor 1 for treating disorders associated with receptor
